ANTI-RETURN ALARM KIT

ACTIVATION KIT ACCESSORY
### FOR AUTOMATIC GATES

mec+ plus people
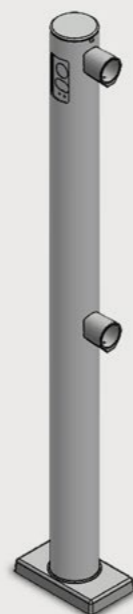

DESCRIPTION

The best-selling accessory of recent years, it verifies that the user is using the gate in the correct direction inside the store, if this is not the case, it warns the user via an audible alarm that he is crossing the gate in the non-permitted direction. Useful for helping the flow of customers and minimizing unwanted exits from the entrance, the sensor, in addition to signaling this violation, will continue to sound for a limited period until the user returns to the correct path. This sensor is a photocell which is inserted in the rear rail, useful for protecting the arm during the movement.

BAR CODE READER

ACTIVATION KIT ACCESSORY
FOR AUTOMATIC GATES

mec+ plus people

DESCRIPTION

The "Bar code reader" activation kit allows for a gate to pass through only users with a regular receipt (or a Ticket) containing a previously generated bar code. The presentation of an invalid receipt may generate a visual and audible alarm that draws attention to the subject. The Validation column can be used at the entrance or exit of specific Areas. Installed near the exit, it allows to check if the user has a valid barcode thus avoiding the check by a natural person. The terminal is equipped with a CPU with an internal clock which allows it to function autonomously, or connected to a server, when a user presents the ticket/receipt, the terminal verifies the code autonomously and grants the transit by opening the automatic doors or denies it by generating an audible alarm which calls the attention of the service personnel.
